

A3

quinolonecarboxylic acid- or naphthyridonecarboxylic acid with an insoluble matrix, heating the mixture until it flows, and micronizing the mixture.

Sub A4
B3

8. (Amended). A process for improving animal uptake of quinolone- or naphthyridonecarboxylic acid comprising orally administering to the animal a solid phase dispersion of a quinolonecarboxylic acid- or naphthyridonecarboxylic acid and an insoluble matrix in an effective amount to mask the taste of the active agent.
